Re: Xypex Concentrate Coating – Chemical Equivalents

Dear Johnny,

This letter will confirm the following points which we discussed:

1. Two coats of Xypex Concentrate with a total application rate of 1.3 kg per square meter (0.65 kg per coat) will have an amount of reactive chemicals equivalent to one coat of Xypex Concentrate and one coat of Xypex Modified applied at a rate of 0.8 kg per square meter per coat.
2. For waste water treatment/sewage treatment plants the use of two coats of Xypex Concentrate with a total application rate of 1.45 kg per square meter is acceptable to the manufacturer and will offer superior waterproofing and chemical protection.
3. For chemical tanks two coats of Xypex Concentrate with a total application rate of 1.645 kg per square meter is acceptable to the manufacturer and will offer superior waterproofing and chemical protection.

If you have any questions please do not hesitate to contact me.

Best regards,

A handwritten signature in dark ink, appearing to read "Dave Ross", is written over a large, light-colored circular mark.

Dave Ross
